More Info:

Pseudostreaming Flowplayer

Hi,

I'm using sexylightbox for playing .flv files, but I would prefer to use .mp4 files.

The reason I use .flv: It works with every browser, no "missing plugin" error (e.g. google chrome using kde 4.7)

Recently, I checked the flowplayer website and found interesting things about pseudostreaming of .mp4 files. I installed the apache mod on my server and it works quite well so far.

For Flowplayer pseudostreaming works as a plugin.

So I guess it shouldn't be too difficult to include it in Ari Sexylightbox

Is there any chance for this feature in upcoming releases ?

Or is there any other way to play .mp4 files without the hassle of "missing plugins"

There was a discussion about playing mp4 files one week ago: "Play MP4 in Flow Player"

Maybe you can send me this versions of sexylightbox as well

thanks

regards

Alex
