
How to customize Emerge from options

Posted by JanBengt - 2011/10/10 09:11

Hi, I'd like to know if it's possible to disable or change the lightbox's "Emerge from" functionality (managed from the Basic Options list)? In my case, none of the four existing options (top, left, right, bottom) is quite what I want. It should rather look like if the lightbox emerge from right under itself, from the point where the link is clicked.

Hello,

Download and upgrade "ARI Sexy Lightbox" module. New version provides ability to set "Emerge from" parameter to "None".

PS: Don't forget to clean browser cache.

Regards,
ARI SOft
