## Stuck in 1.7

Posted by maxmmize - 2011/10/20 10:58

---

Hi,

Great work. I have used this for some time and am a fan of the lightbox.

I am not able to get it working in J1.7. I have plg\_extensions installed and enabled. I have the mod enabled and published to all pages.

I am trying to get the lightbox to load in a content page. My ultimate goal is to get an inline link to load in a module.

Can I send you some login creds so you can take a look? I can donate some money again for your time.

Hello,

Send a link to a page where we can see the problem and temporary access to your J! backend by email please.

Regards,  
ARI Soft

Thank you very much! It is perfect. I already wrote you an extension review so my only way to pay you for your top notch support is to buy more products. I will do so today.

I bought the light box a while back but you came through in a pinch without hesitation. Thank you again and i will buy a couple more products to help support your company!

Thanks!

Can you please share the solution? I'm having similar issues.

Module is enabled for all pages. All plugins enabled.

I'm using the following code, but when I click, it just takes me to the page on YouTube, instead of launching the lightbox.

YouTube video

I managed to get it working but here is a summary of what is going on:

1. I fundamentally don't understand how to use the tool.  
I had hoped for something like {arisexlightbox}path/to/video{/arisexlightbox})

2. After playing round using copy and paste I was able to get the anywhere plugin to work.

See the public video at [www.kaimaiya.com](http://www.kaimaiya.com)

3. No matter what theme I choose in the anywhere plugin settings (While, Old White, French White etc) I still get the same black frame?

4. I seem to have to insert the code in code view in my editor. I've never had to do that before.

5.

Â

Â Click the QuickTime Logo to start the pop-up window.Â

Any ideas?

Right now I'm thinking it is easier to make the QT files into flv and run them that way.

Thank you,

GG

1. Documentation how to use the plugin can be found on plugin settings page in "Description" field. It also contains code samples. If you want to show a YouTube video into the lightbox, use the next code for "ARI Sexy Lightbox Anywhere" plugin:

```
{arisexylightbox activeType="rcontent" width="800" height="450" url="http://www.youtube.com/watch?v=WyA1dzfKywg" link="YouTube video" title="Video"}{/arisexylightbox}
```

If you use a WYSIWYG editor, switch it to plain text mode before inserting plugin code because WYSIWYG editors can add extra HTML code in design (HTML) mode.

3. Only one theme can be active on a page. It seems black theme is selected in "ARI Sexy Lightbox" module which is also present on provided page.
