Lightbox pulls in template background

Posted by bluerocker - 2011/12/11 17:28

_____

I assume Im missing something obvious but I have played with all of the settings I can think of and when I click to open a lighbox, it pulls in my templates background image and pushes the article Im trying to display down. A sample of this can be seen at:

Page Example

If you click the "Read More" you will see what I am referring to.

Im assuming this may be a CSS issue so any advice on what I can try changing would be appreciated.

Thank you!

_____

Hello,

Could you provide a screenshot where we can see described problem? You can provide it by email.

Regards,
ARI Soft

_____

Background image is shown because your site template is design in that way. It shows this image in component view mode (mode when a site template shows only component content without header, footer and etc.). Add the next code before tag to /templates/gk_quay/component.php file to remove the image:

body div#gk_mainbody
{
 margin-top: 0;
 background-image: none;
}
