
Integrating Sexy Lightbox with Tables

Posted by lowenstein63 - 2011/12/23 13:56

Sorry for the newbie question. I would like to create a table from a CSV file, that works great. Now I would like to have a link in the table to open a lightbox for a vimeo file. I used the inline code and embedded into the CSV, and a get the text of the in the table:

```
{arisexylightbox activeType="rcontent" width="500" height="350" url="http://vimeo.com/9034166" link="Renegades (Strand)" title="Video"}{/arisexylightbox}
```

Thanks for your help.

Figured it out. I used the HTML code with rel=sexylightbox.

Great Product!!!

Hello,

Yes, it is possible to use the following HTML code:

Vimeo video

Regards,
ARI Soft
