flv in lightbox
Posted by tbasien - 2012/01/10 10:48

_____

I have a video in my Joomla articel, tag with
{flv}name{/flv}.
Now I installed ARI Sexy Lightbox and followed the instuctions, putting {arisexylightbox} around the tag:
{arisexylightbox}{flv}name{/flv}{/arisexylightbox}

I hopped, that now the video is opend in the light box, but it does not.
If I use
{arisexylightbox activeType="rcontent" width="792" height="294" url="images/video/visulox_twofactorauthenication.flv"
link="Flash object" title="Video"}{/arisexylightbox}

this opens the "download" dialog.

_____

Hello,

The last code should work. Could you provide a link to a page where we can see a problem?

Regards,
ARI Soft

_____

I disabled/enabled the Player and now it works.

_____

can I come back on this issue?
How can I configure an autorun for the video?
Is is possible, that the modul determins the size of the video itself?
Is an addidional play like "allVideo" neccessery. I disabled him, and it still works, but I cannot find the configuration of the player.

regards
TAB

_____

Set "Auto play videos" parameter to "Yes" in "ARI Sexy Lightbox Anywhere" plugin settings or add
opt_movieAutoPlay="1" attribute to {arisexylightbox} tag.

Regards,
ARI Soft
