_____

Hi,
I am a newby and try to etup ari sexy lightbox. The aim is to navigate through immages within an articel. Once any image is clicked the lightbox should pop up and diplay that image and have navigation buttons next/previous so that all images within that same articel can be viewed.

refer to link:
http://test.ctsnam.com/index.php?option=com_content&view=category&layout=blog&id=65&Itemid=89

currently I have added the code into HTML, this only brings up each individual image without navigation (makes sense):

How do I configure Ari sexy lightbox to be able to navigate through the images of a specific articel?

thx
E.

Hello,

Disable "ARI Sexy Lightbox Lite" plugin because it doesn't require if you use "System - ARI Sexy Lightbox" plugin and specify "rel" parameter in the way:

rel="sexylightbox"

instead of:

rel="sexylightbox"

Regards,
ARI Soft

Hi,
if I add more articles with pictures theses are also included in the lightbox effect. I want the lightbox just to "browse" the pictures within one articel and not all articles. Is this possible.

The test site is build up such that for the category solar all pictures are in one folder.

regards

E.

_____

Use different group parameter for each article. For example use rel="sexylightbox" attribute in one article and rel="sexylightbox" in another article.
