
Single Images With Description Text

Posted by jackibar - 2012/02/17 00:02

I'm needing a way to display a set of images, 1 at a time, with the description text out to the right of each thumbnail, for example:

THUMBNAIL 1 - Description would go here

THUMBNAIL 2 - Description would go here

THUMBNAIL 3 - Description would go here

(etc.)

For each thumbnail, when clicked, I would like the lightbox to pop up with the full-size image.

What code do I use to make this happen?!

You can use "ARI Sexy Lightbox" module, set "Choose type" parameter to "Image gallery", "Image gallery -> Layout type" to "Simple gallery", "Simple gallery -> Container CSS class" to "asexy-right-descr" and add the next CSS rule to a site template CSS file:

```
.asexy-right-descr .asexybox-outer
{
  float: left;
}
```

Regards,

Thanks SO much for the help! Okay, I have made these changes in my css template and the Ari Sexy Lightbox Module... Now what code do I need to put in the article to call the images from the module?

If you want to load "ARI Sexy Lightbox" module into an article, use the next code:

```
{arisexylightbox moduleId="MOD_ID"}{/arisexylightbox}
```

Where MOD_ID is ID of "ARI Sexy Lightbox" module. Module should be enabled.

Thanks! I found this in the instructions *after* I posted my question...!

The one thing I'm still not able to get working is the description to be aligned vertically in the "middle" of the image. If you want to see, the page is at:

<http://sidewalkministries.com/index.php/truck-conversions>

I'd like the description text to not be at the top of the image, but centered vertically... Is there a way to do this with my css template?

It is not possible to do only with custom CSS rules, it requires to change gallery HTML template.

Which template file would need to be changed? I might play around with that... just need to know which file(s) to work with!

See \modules\mod_arisexylightbox\includes\kernel\SexyLightbox\Models\Templates\class.SimpleGalleryTemplate.php file. If necessary, we can help to modify it.

Thanks so much for your help! I'm trying to tinker with this now but can't quite get it... I thought I could just add: vertical-align="middle" to the td tag... - ?

It is necessary to split image and title to different elements.
