
Flickr gallery cropped thumbnail sizes

Posted by aka.andrew - 2012/02/21 08:39

Hi there

I'm using the Flickr gallery function, and I need to lay out my thumbnails at the same size regardless of whether the shot feeding in from Flickr is Portrait or landscape. This will involve creating a cropped thumbnail via css I presume.

Can anyone give me any guidance as to how to go about doing this? The 75px square thumbnails are just too small for me and, ideally, I'd like my thumbnails to be rectangular in shape.

I would be incredibly grateful for any help anyone can offer.

thanks

andrew

Hello,

Flickr API provides ability to get image with predefined dimensions(75, 100, 240, 500, 1024 on the longest side or original image). It doesn't provide ability to get images with custom dimensions.

and you don't know of any way I can CSS the dimensions with a custom class of my own to achieve what I need?

Could you provide a link to a page where we can see image gallery and an image where we can see what do you want to achieve? You can send it by email.
