Hello,

Could you explain what should be shown into the lightbox for code? When

I use ARI Sexy Lightbox not the Lite

I show my images at a 100% width of page about (1000px) when they are in the K2 blog article. I want people to be able to click on that image (I know it's big already) but I want them to be able to click it and popup a lightbox showing the full size image of about 1200px.

existing code:

it would be a lot of work for me to change the html in a few hundred pages to this:

is there an automatic way of implementing the plugin?

a DOM re-write or something that will generate the required tag automatically at render time?

Thank you. Do you want to apply lightbox only for images with width="100%" attribute? Could you provide a link to a sample page?
