
Exclude images from sexy lightbox thumbnail

Posted by chatfriend2001 - 2012/03/06 21:36

Hi,

is there a way to exclude certain images from the sexy lightbox thumbnail function?
I just need it for 3 pictures and don't want to disable the lightbox thumbnail plugin for this.
Do I have to resize them or is there a parameter?

Edit: There is another minor problem I noticed:

I use an android phone (2.3) to browse to my website, zoom in and click on a thumbnail:
The lightbox opens, but it moves out of the screen (to the corner most of the times).

Best Regards,
Christopher K.

Hello,

If you want to skip some images from processing by "ARI Sexy Thumbnails" plugin. Download and upgrade plugin. After this add nothumb CSS class to necessary images.

Regards,
ARI Soft
