
No images in popups

Posted by judemacd - 2012/03/08 17:44

Hi,

I am using the ari sexy lightbox module in a module position on a joomlabamboo template (Joomla 2.5.1).

If I configure the ari module to use jquery, I get a blank page (module title does not even show), however if I set it to not use jquery I get the thumbnails and lightbox but the lightbox has no image in it.

Do you have any suggestions?

Many thanks for any help

Hello,

Where we can see described problems?

Regards,
ARI Soft

Hi

Many thanks for a swift reply - this is not a live site as it is under development, so I am emailing you an admin login

Thank-you for going into my site, finding that there was a problem with the my Joomlabamboo template's template styles combined with the Ari Sexy Lightbox and IE8, then creating me a new style to fix it!

WOW support and amazingly fast.

This fix also also means that I am now able to successfully intergrate the sexylightbox with the slick gallery.

SOLVED THANK-YOU!
