
URGENT - Lightbox Anywhere code is breaking page

Posted by ajldesign - 2012/03/12 04:33

Hi there, I hope Admin can help me ASAP, I had issues using the lite version to display content in lightbox so I brought the commercial version and now i cant get that to work either. The commercial plugin "lightbox anywhere" is more what I need anyways.

Im trying to display an article in a lightbox, so I get the ID of the article, then add the code: {arisexylightbox activeType="article" width="300" height="250" id="94" link="Show article" title="Article"}(I put an image between the tags to link from){/arisexylightbox} and then when I view the page on the site all I get is a blank white page , the site does not load any of the webpage including the normal template, the address is in the browser correctly, but its just blank. When I remove the plugin code it goes back to normal.

Please help me ASAP!!! Im due to show the client this functionality working by Tommorrow, I hope this is an easy fix.
-Andrew

***UPDATE - I just tried this same thing with a text link and it still does the same thing.
