
Plugin Confusion

Posted by ehwtech - 2012/03/21 07:25

Hi, Im not sure if im using the wrong plugin, too many or theres something wrong.

I have created a link, added rel="sexylightbox" to it, the popup loads in a tiny jumble, then shows 404, however the link itself without the rel works.

Any ideas?

Hello,

What HTML code do you use for the link? Could you provide a link to a page where we can see described problem?

Regards,
ARI Soft

Ok

So i found out what i was doing wrong, i wasnt allowed to show the full link before as the site was not live (release lineup)

So this is the link i have working, i was missing the "TB_iframe=true&height=450&width=800" part.

Joomla seems to be stripping my code, however it works, so im leaving that.

only issue i have is with the &tmpl=component as it shows the heading of article

You can also use the next code for "System - ARI Sexy Lightbox Anywhere" plugin (set "Mode" parameter to "Anywhere"):

```
{arisexylightbox activeType="article" width="800" height="450" id="113" title="xavier rudd"}}{/arisexylightbox}
```

About issue with heading, it is a Joomla! issue. You can read about it here. We can help to fix it if you provide a temporary access to your J! backend by email.
