
lightbox from within article not working...

Posted by tday - 2012/04/19 19:43

Here is the code in my article:

Readable Text

...

Any ideas?

Hello,

Set "Include jQuery" parameter to "Yes" in module/plugins settings and re-save module/plugins settings.

Regards,
ARI Soft

This setting is already set to Yes for the plugin and module.

I have the System - ARI Sexy Lightbox Anywhere disabled because it interferes with module formatting.

In any case re-save plugins and module settings. Even if "Include jQuery" parameter is already set to "Yes".

Well that did it - not sure why - thank you very much!

Now I know why, there is some sort of jquery library conflict with the Vinaora Nivo Slider module on my site.

The slider now disappears on every page except the one where the carousel module is shown.

If I disable the sexy lightbox plugin, my slider re-appears.

Any advice?

Provide a link to a page where we can see described problem.

Regards,
ARI Soft

OK, I enabled the sexy lightbox plugin...

Go to this link which shows the page header (with the vivo slider) as it should show on most pages.

This is the only page with the carousel.

If you click on any of the other main menu links, the vivo slider does not appear (but it should).

Thanks for looking!

This problem with implementation of your slider. It can't work properly when several jQuery instances are load on a page. You can contact slider developers so they fix this problem or disable jQuery loading in slider settings (if it provides this ability), disable jQuery loading in "ARI Sexy Lightbox" module/plugins and load jQuery library with help of a 3rd party plugin.

PS: We can help to implement the second solution if you provide a temporary access to your J! backend by email.

Regards,
ARI Soft

Thank you for pointing me in the right direction. After a bit of research I found several Joomla plugin extensions that are designed for this purpose and now all my jquery dependent widgets are working.
