Sexy Lightbox Link

Posted by sherbert - 2012/04/29 13:51
_____

:unsure: Can anyone help please? Unfortunately due to us no longer having a programmer who altered this page I cannot get my head around how to control the rollover functionality he put on Sexy Lightbox Links.

Here is the page:

Problem page http://nano.appstienda.com/es/productos

When the page first loads the correct button displays saying MÐ±s info however as soon as I rollover it, the button displays the wrong rollover language and then stays that way.

Has anyone come across this problem before and maybe someone could point me in the right direction of how to fix this please?

_____

Hello,

It seems you use modified version of the extension. It shows the next imagea on mouse over and mouse out events:

http://www.nanokleen.es/images/nanotec/More-info-over.png

http://www.nanokleen.es/images/nanotec/More-info-up.png

You can replace them with appropriate images.

Regards,
ARI Soft

Many thanks for your assistance with this problem, unfortunately I have now updated the system with the latest version which actually overwrote all the custom programming of my colleague. I do now have another question however.

On the same page http://nano.appstienda.com/es/productos when I click on the lightbox link, the box appears however my CSS of the image and text inside the box now doesnÒ't work. Any ideas why the CSS has now suddenly stopped in the lightbox program?

Regards

Seth

_____

What CSS rules do you mean? Where you add it? What do you want to achieve?

Hi,

I am trying to format the text and the image in the actual lightbox popup. Before it had a nice background and formatted text, however now I cannot seem to do any CSS in the popups when I click More info.

Regards

Seth

_____

It seems you load articles into the lightbox. You can try to load an article (for example this article) into a browser and see that it doesn't have any additional formatting so this is not "ARI Sexy Lightbox" issue.

_____

Hi,

As requested I took a copy offline and did as you suggest and the formatting works perfectly when the article displayed normally. This indicates that the issue is with Sexy lightbox.

Regards

Seth

I have attached a screenshot for verification and you can see the simple formatting I am trying to achieve.

_____

Open the link which we provided our previous post. Joomla! can show pages in full view (with header, footer and other elements) and in component view (without header, footer and other elements). "ARI Sexy Lightbox" shows articles in

component view and seems your site template doesn't load background and other styles for component view. We can recommend to contact site template developers so they extend site template.

Regards,
ARI Soft

_____

Please look at this link:

http://nano.appstienda.com/en/products

This version of the site is built on an rt-gantry template and is not custom built. This is a standard Rocket Theme template and the Sexy Lightbox still has the issue, which negates any problem with custom built templates.

Regards

Seth

_____

Open this or this or this link into a browser and you will see that content without formatting. We described why it happens in our previous post.

PS: If you want to show articles with header, footer and other elements, remove "tmpl=component" parameter from "Read more" link.
