
Only Module Showing

Posted by mjrnbett - 2012/05/18 23:08

When I activate the lightbox for a module, I only see the module on every page. What is supposed to happen is that the whole page with the module with the link in it should display but that is not the case. Any thoughts?

Hello,

Could you provide a link where we can see the problem?

PS: Possible solution can be found here. See question #4.

Regards,
ARI Soft
