
With jQuery, no images

Posted by aerts.thijs - 2012/05/21 14:05

When I turn on the jQuery, I can only see the image shortly.
without the jQuery the imageslider shows up correctly but doesn't work. Also the navigation arrows don't appear.
I hope you can help me.

<http://www.floorzero.nl> (here you can see the problem)

Hello,

The latest version of the extension is 1.6.20, but v. 1.3.3 is used on your site. Upgrade the module to the latest version.

I downloaded the latest version, this worked! Thanks!

I noticed that the module is slower, is there anyway to let it load faster?

and it seems that the picture doesn't have to load. when you click the arrow it load instantly.

the images are indeed loading right on the site, but when you look at www.floorzero.nl you will see that it takes long for the first image to be loaded. When you click one of the arrows it looks like the image was already loaded but is was hidden behind the "loading image".

is there any way to change this?

"ARI Image Slider" uses "Nivo Slider" jQuery plugin and it loads all images before start to work.

I understand that the images are being loaded before the slider starts to work. But how can it be that when you click an arrow the image loads immediately.
It seems that the images are already loaded but hidden by the loading image. Can i disable the loading image or something like that?

It is necessary to modify javascript code of "Nivo Slider" jQuery plugin.
