
ARI lightbox with Carousel not working

Posted by webber2k12 - 2012/05/24 03:33

Hi,

I just downloaded the Carousel and installed it then purchased the ARI sexylightbox. I enabled just the lightbox. I got the Carousel working fine but no matter what I try, the lightbox isnt functional. I also noticed that now I have a module for the lightbox?

this is the url to the page.

<http://www.edgewoodcma.org/ministries/2nd-chance-youth>

I inserted the carousel module and the lightbox into the article using the same custom position for both where I want it to display.

Thanks in Advance

I see now that there are both a sexylightbox mod and plugin! which is used with the carousel? How are they configured?

Hello,

"System - ARI Sexy Lightbox" plugin is required for integration "ARI Sexy Lightbox" with "ARI Cloud Carousel". It is possible to integrate "ARI Sexy Lightbox" with "ARI Cloud Carousel" if thumbnails are shown into a carousel ("Use thumbnails" parameter is set to "Yes") or carousel images are associated with links in INI file. In your case you show original images in carousel, it is nothing to show in the lightbox.

Regards,
ARI Soft

Ok, I have unabled the lightbox mod. I checked the settings in the lightbox plugin and it all seems to be ok. I set the jquery no conflict to yes and the lightbox is working. Is there a more detailed documentation of integrating the carousel and lightbox together?

Thanks for your quick reply!

Currently we are working on updating documentation for "ARI Cloud Carousel" module. It will contain detailed instructions how to integrate it with lightbox extensions.
