## inline content...how to?

Posted by nkellert - 2012/06/03 08:13

---

I was looking for how to use my newly purchased ARI sexy lightbox to go to inline content.

I saw the demo and unfortunately there isnt much on how to do it there...nor in your tutorials. This is exactly what i was looking for. Do you guys have a tutorial on how to add the content and then link to it. I dont want a simple web page light box with a full website...just the content. Thanks!

Ok I was kind of looking at this

```
arisexylightbox activeType="icontent" width="300" height="250" link="Click me" title="Hidden text"}
  Inline content which you want to show in sexy lightbox goes here.
{/arisexylightbox}
```

got it out of your manual. What Im trying to do is use inline content that has html....that popsup in a lightbox...that is linked through an image. haha I know complicated. Basically I have products....and i want people to be able to click product pictures in a form.....and find out product specs in a lightbox. As usual...you guys are great.

---

You can use a HTML code in inline content. It is not a problem. Documentation for "ARI Sexy Lightbox Anywhere" plugin can be found here. Check that the plugin is enabled and "Mode" parameter is set to "Anywhere".

A sample code:

```
{arisexylightbox activeType="icontent" width="300" height="250" link="Click me" title="Hidden text"}
  Bold text italic text.
{/arisexylightbox}
```

---

Ok so heres what im doing....Im putting in

```
{arisexylightbox activeType="icontent" width="300" height="250" link="Click me" title="Hidden text"}
```

Size of Tent  
Seated Guests  
Area Required  
Square Footage  
Color

20â€™x 20â€™

Up to 32  
30â€™ x 30  
400  
White

20â€™x 30â€™  
48 - 64  
30â€™ x 50â€™  
600  
White

20â€™x 40â€™  
48 - 64  
30â€™ x 50â€™  
800  
Yellow/White Stripe

{/arisexylightbox}

and this is what i get .....

[http://test.kellertcreations.com/index.php?option=com\\_chronoforms&chronoform=Party\\_Quotation](http://test.kellertcreations.com/index.php?option=com_chronoforms&chronoform=Party_Quotation)

am i doing something wrong?

The code works fine on our test server. Could you provide a temporary access to your J! backend by email so we can investigate the problem?

This is a problem with Chorofoms extension. It removes {/...} text. For example you can temporary disable "System - ARI Sexy Lightbox Anywhere" plugin and see that {/arisexylightbox} will be removed from a form page. For example you can add {/test} code and it will be removed too. If you add plugin code to an article it will work fine. You can see it here. Contact Chronoforms support so they provide solution how to fix the problem with their extension or you can use "System - ARI Sexy Lightbox" plugin. The HTML code for "System - ARI Sexy Lightbox" plugin:

---

Size of Tent  
Seated Guests  
Area Required  
Square Footage  
Color

20â€™x 20â€™  
Up to 32  
30â€™ x 30  
400  
White

20â€™x 30â€™  
48 - 64  
30â€™ x 50â€™  
600  
White

20â€™x 40â€™  
48 - 64  
30â€™ x 50â€™  
800  
Yellow/White Stripe

my question to you is....if its being removed...then why is it separating the code and you get the table and still see the click me stuff.

or when you say removed....did you mean it ignores it.

## Re: inline content...how to?

Posted by admin - 2012/06/03 09:52

The component removes `{/arisexylightbox}` tag (it removes all `{/...}` tags) and as result the code looks like:

```
{arisexylightbox activeType="icontent" width="300" height="250" link="Click me" title="Hidden text"}
```

instead of:

---

```
{arisexylightbox activeType="icontent" width="300" height="250" link="Click me" title="Hidden text"}
...
{/arisexylightbox}
```

It doesn't contain a text between {arisexylightbox} and {/arisexylightbox} tags (because {/arisexylightbox} tag is removed by the component) so the lightbox with a blank content appears.

According to our previous post, you can see that the plugin works in an article and you can see what happens if temporary disable "ARI Sexy Lightbox Anywhere" plugin or add {/...} text. For example {/text}, it will be removed by Chronoforms.

ah i got you...the closing code is whats being removed.....now i get it...thanks alot! have you heard of any other form builders that work better?

Also im wondering if i stop using the wizard if it will start behaving and post the code as is....hmmm...ill post my findings for other people to see.

We don't have a big experience with form extensions. We suppose it can work with Chronoforms, just contact extension developers so they fix the problem.

---

this is their response and it worked

"Hi nkellert,

This may be happening because the RePublisher tries to replace strings in curly brackets. Please try turning RePublish off in the Show HTML action and see if this fixes the problem. That will help know where to look.

Bob"

Theres a settings in the Show HTML edit screen that specifically says "remove curly brackets" ...turned to off....done!!
