
Everything enabled & re-saved...still showing code

Posted by pixelbiz - 2012/06/09 00:39

Hello:

I have enabled all Plugins and Modules and opened them and resaved settings.
But all I get is the shortcode appearing on the page instead of a gallery link.

```
{arisexylightbox activeType="imglist" thumbHeight="100" dir="images/properties/Photos/Covina" type="customtext"}Show images{/arisexylightbox}
```

What could I be missing? I'm using another lightbox on the page and it works fine (but it can't show a link.)
The ARI Sexy Lightbox is in the green table on this page:
<http://www.fromeinc.com/available-listings/available-los-angeles/59-san-dimas-covina-blvd-business-park>

Thank you in advance for any assistance.
Dena

Hello,

Set "Mode" parameter to "Anywhere" in "ARI Sexy Lightbox Anywhere" plugin settings.

Regards,
ARI Soft

Thank you, that helped. Now I see linked text... but when you click on it, nothing happens.
I've added another different ARI Sexy Lightbox code below it and that one seems to work.

Thank you for your help!
Dena
