
Load article in lightbox without nested lightbox

Posted by elehost - 2012/06/22 18:57

Hello,

I am trying to load an article within a lightbox already opened.

I don't want a nested (a second) lightbox to load within the existing lightbox.

Is there a way to load an article linked within the already opened lightbox article so that it loads the linked article without the extra lightbox opening up?

I am unable to link directly to the article as the template is loaded within the lightbox.

Please let me know if there is an easy solution to this and thanks for your time.

Paul

Hello,

Place link to the second article in the article which are loaded into the lightbox.

Thanks for your quick reply! You guys are super fast...

I tired that but the template / design is loaded in the lightbox as well (the surrounding look). This makes it unusable.

Is there another way to do this that I am missing? I dont want the design to display within the light box when the link within the lightbox is clicked. With the first light box link (the one that opens the actual lightbox) the design is not included.

I figure I can set up another teplate and manually assign those extra pages, but would rather not given the extra time it will take to manage it in Joomla 1.5.

Thanks for any help you can provide.

Add "tmpl=component" request variable to an article link. In this case the article will be loaded without header, footer and other elements.

Awesome thanks! I should have thought of that...

It worked like a charm...

By any chance, do you have a quick way to do the same with a external youtube video?

So again I am loading the video from within a lightbox opened article.

Sorry, but it is impossible. Possible solution you can load YouTube video into an article and use link to the article instead of video.
