
ARI Sexy Links\" plugin

Posted by SDIGraphics - 2012/06/23 01:40

I'm using ARI Sexy Links\" plugin
for a login and register form.

Works great but when clicking the login or submit button or any other link witch brings you to the next page the page opens in the same light-box window instead of the actual page like after successful login the profile page. How can I fix this Please it's not practical to few a webpage in a 200x200 pix window.

Hello,

It is necessary to add target=\"_top\" attribute to tag for links. For example if HTML code for a link is:

Page

Use the next following code:

Page

Thanks for your quick response.

To understand, what your saying is

I have to edit the links for example the login

module in the login module script? Or can I do Thad at the CSS selectors.
