Help with creating code to show sexybox
Posted by D@nCeR - 2012/07/03 11:40
_____

Heya,

need a little help creating the code to show what i need..

I need sexy box to show 1 image then when this image is clicked to show the gallery of a different Dir..

is this possible? ive tried multiple combinations of codes but cant get it right..

thanks in advance

_____

Hello,

You can find a sample code here. It looks like:

{arisexylightbox activeType="imglist" thumbHeight="100" dir="images/stories;images/banners" type="customtext"}{/arisexylightbox}

Where LINK_TO_IMAGE is a link to an image.

Regards,
ARI Soft

_____

http://www.lakeland-blinds.co.uk/NewJoomla/index.php/products/vertical

theres 2 attempts at coding.. neither work.. I think the packages are not configured correctly or the code is off

_____

Switch WYSIWYG editor to plain text mode and re-enter plugin code. WYSIWYG editor adds extra HTML code in design which breaks plugin code.

_____

so what your saying is i have to design my whole site to not use a text editor as your plugin is incompatible with any editor?

Or at least turn off the editor to put the code in for the lightbox to work after ive built the pages? im sorry but i fail to see how that is not a major flaw in the software..

Can you refund my purchase and i will look elsewhere for a more a compatible plugin?

_____

It is compatible with editors, but if you use copy-paste to enter code, editors modify it because they implement in this way. If you want to copy-paste code, switch your editor temporary to plain text mode, this is limitation of WYSIWYG editors.
