IE flickering when loading lightbox Posted by sainthout - 2012/08/13 20:13
Hi,
When the lightbox opens, IE suddenly starts flickering while opening the box. Is there a solution for this problem? The url to the website is: www.surinametoursandtrips.com The one that causes problems is 'Soorten tours' -> 'Tours per gebied'
Thanks

Hello,
What IE version do you use? We have checked it in IE 8-9 and it works fine on our side.
Regards, ARI Soft

Hi,
Thanks for fast reply. I tried it on a Windows 7 Ultimate 64-bit with IE 9.0.8112.16421 and a Windows 7 Home Premium 64-bit with the same IE, both show the same problem. Both with cleaned cache and up-to-date ATI graphics drivers.
Another Windows 7 PC (same IE version) doesn't show the problem at all.
I wonder if there is a way to investigate this further :(
EDIT: the only thing I discoverd is that when I turn off the grey thing behind the lightbox (which darkens the page) the problem disappears completely
Re:IE flickering when loading lightbox Posted by sainthout - 2012/08/13 21:00
I forgot I never updated the jQuery that came with the template. When updated version 1.6.4 to 1.7.2 the problem completely disappeared and the transition now looks very smooth.
I recommand everyone with problems like this to make sure they use the latest jQuery and not some old version that came with a template or other plugin.
Thanks anyway for trying to help me :)
