How to load lightbox on pageload
Posted by Acarm - 2012/08/14 19:57
_____

Friends I have few questions:

1. How can I load Lightbox on page load?
2. How can I load any module alongwith some HTML in lightbox?
3. How can I limit lightbox once a session.

Kindly reply.

_____

Lite version doesn't support this ability. About full version, if you want to use "ARI Sexy Lightbox" module, it is possible to session lifetime, when open the lightbox (on page load, when a user leaves a page) in module settings. If you want to use the plugin, it can be done with help of plugin parameters.

_____

The extension provides ability to load Joomla! modules into the lightbox. It also supports ability to load Joomla! articles into the lightbox and it is possible to load a module into an article and then load the article into the lightbox.

Regards,

ARI Soft

_____

It can be the workaround but if I will add some module to the page and then load that page in the Lightbox, all banners, headers etc. will also load alongwith the module.

_____

The extension loads only articles without site template blocks like header, footer and etc.
