## Problem getting module to load in article

Posted by demig - 2012/08/24 21:34

---

Hi,

I am trying to load the module in an article to then display a gallery. I tried using inline images but could not get that to work either. I have had a good look through the forum and trying many things and I am now utterly confused but I believe the problem is to do with jquery as I get errors from my last attempt. Currently I have the module and all plugins activated and on the page concerned at <http://www.newburn-archers.co.uk/index.php/gallery> I edited the article via JCE editor but switched to code not WYSIWYG. I added the code:

```
{arisexylightbox moduleId=""}/arisexylightbox}
```

The module number was taken from the module listings.

Within the module settings I have stated to look in images/clubimages  
Which is my directory and contains a couple of jpgs as a test.

Under the module options: include jquery is on yes using google cdn.

On the page itself I get 3 errors as follows:

Message: 'jQuery' is undefined

Line: 13

Char: 1

Code: 0

URI: [http://www.newburn-archers.co.uk/modules/mod\\_arisexylightbox/includes/js/jquery.easing.js](http://www.newburn-archers.co.uk/modules/mod_arisexylightbox/includes/js/jquery.easing.js)

Message: 'jQuery' is undefined

Line: 12

Char: 2

Code: 0

URI: [http://www.newburn-archers.co.uk/modules/mod\\_arisexylightbox/includes/js/jquery.sexylightbox.min.js](http://www.newburn-archers.co.uk/modules/mod_arisexylightbox/includes/js/jquery.sexylightbox.min.js)

Message: 'jQuery' is undefined

Line: 58

Char: 2

Code: 0

URI: <http://www.newburn-archers.co.uk/index.php/gallery>

I wonder if you can help with this, I am somewhat new to Joomla so may be missing something obvious!

On googling some more I believe this might be due to the site using "mootools" This is certainly in the source for this template.

Thanks

Iain

Hello,

Use the next code:

```
{arisexylightbox moduleId="92"}/arisexylightbox}
```

and check that the module is enabled.

---

If the plugin(s) from "ARI Sexy Lightbox" are enabled (for example "System - ARI Sexy Lightbox Anywhere", "System - ARI Sexy Lightbox" and etc.), open plugin settings page, set "Include jQuery" parameter to "Yes" and re-save plugin settings even if the parameter was set to "Yes".

PS: If it doesn't help, could you provide a temporary access to your Joomla! backend by email so we can investigate the problem?

Regards,  
ARI Soft
