
no lightbox with swf file

Posted by marceff - 2012/10/07 11:37

According to your tutorial, I set the module options to choose "remote content" to show a swf file. The result, however, shows the contents of the movie in full screen regardless of the choice of the theme and size made on the form. In other words, the form is absolutely useless because it does not appear. Almost looks like a link to the file that appears in the same window and to go back to the previous window is possible only through the browser command. Can you tell me why?

Thank you

Hello,

Where we can see the problem?

Regards,
ARI Soft

Unfortunately there is no possibility to give you a link, as I am working on a host which has only IP number, waiting for the domain name be redirect once the site will be ready. To see it you would have to modify you PC/Mac host to match IP and domain.

Anyway, your module is acting as just a link, when a click on the thumbnail no lightbox shape appears but the swf movie full screen, not even a button to close, you have to go back selecting the browser arrow. It happens the same if you load a simple image. I tried to link to a website and it shows but no lightbox layout, no theme at all, no changes at all. I use joomla 2.5.7

It can be a problem with a 3rd party extension or site template. Check browser's error console (press Ctrl + Shift + J in FireFox browser).
