
Photos in Ari Table

Posted by zucci2 - 2012/11/20 17:46

My client currently is using an Ari Data Table to create an interactive contact list using a csv file exported from excel as the source.

<http://www.bishop-hartley.org/index.php/contact-faculty-staff>

They are interested in adding a small photo of each staff & faculty member to the listing.

Is this possible and is there documentation available for doing so?

Thank you!

Michelle

Hello,

You can save links to photos in the CSV file and use "Columns settings -> Format" parameter to convert them to HTML images. For example if a CSV file contains "Photo" column which contains a link to a photo (for example images/photos/photo1.jpg or <http://domain.com/images/photo1.jpg>), set "Columns settings -> ID" parameter to Photo value and "Columns settings -> Format" parameter to the following value:

Regards,
ARI Soft
