Hello,

Is it possible to see the problem? If not, send page files of the page where error occurs. You can read how to do it here.

Regards,
ARI Soft

Hi same problem with me. the front end shows the code itself, not the 'light box'

<http://enthevide.com/index.php/kunena-2013-02-27>

please help.
thanks.

Hello,

If you use a WYSIWYG editor, switch it to plain text mode before entering HTML code. Otherwise WYSIWYG editors encode HTML code and it will not work as expected.

No sir,
it is not working,

I am using the MC tiny MCI (Plain) editor.

again, is it work with k2?
thanks

Encoded HTML code is shown on the page. If you can provide a temporary access to your J! backend by email, we can fix the code.

Regards,
ARI Soft

Ok, I disabled all editors...then it work...thanks let me have a look.

If it work on k2 It will be a charm....Thanks

YouTube and Vimeo videos can be shown by ARI Sexy Lightbox extension. It also supports a lot of other features which are not supported by "ARI Sexy Lightbox Lite".
