
Force the same size on images in a slideshow

Posted by Berrot - 2013/02/01 09:21

Hi guys and thanks for a great product.

I was wondering if there is any way to force the same size on the images in a slideshow. I tried to add width/height, but it only changes the initial size, after that the correct image size will be shown.

And yes, I know I should have the same size on all the images, but in the current situation that requires quite a bit of manual job for me, so I was hoping I could just force it using parameters, or maybe modify the CSS/template but I can't quite figure out where to do that and I don't want to edit the source code itself.

TIA
Robert Oedegaard

Hello,

The lightbox shows images in original size in slideshow mode. It is not possible to show they in fixed size. If images have same dimensions, they will show in the same size.

Regards,
ARI Soft

Thanks for the reply, seems like I have to edit the images to make them the same size :)

Have a great weekend
Robert
