
Viewing PDF files in ari sexy lighbox

Posted by timtenn - 2013/06/05 18:51

I am trying to load PDF files in ARI Sexy Lightbox. However, what happens is that the box opens but so small that you can't actually see the PDF file.

Here's what I have tried:

105-56

See the attached picture to see what the problem looks like.

Posted by admin - 2013/06/05 21:52

Use the following code:

105-56

PS: It will work if a PDF plugin is installed in client browser.

I found this post and it's working great on our website. But on mobile devices, the lightbox is too big. Is there a way to use percentages or another way to configure the link so that it will not be larger than the viewport? Thanks!

The extension accepts values in percent for "width" and "height" parameters. For example width=80%&height=90%

Ah, yes -- I had tried that, but forgot to escape the percent signs. Thanks! :-)

Posted by admin - 2014/09/25 12:22

Your code is incorrect. &œ symbol is used instead of " symbol.

thanks, changed to this

catalogo

still got the error, am i missing something?

could be a problem with MijoSEF?

so, this is your answer?

Great support for a PAID piece of sw.

Many thanks.

We provided the answer why it doesn't work before. You used an incorrect code. If it doesn't work with the new code, provide more details. What browser you use, what error occurs, send a screenshot where we can see the error.

tried with

Safari
Chrome
Chrome Canary

code is

catalogo

Re:Viewing PDF files in ari sexy lighbox

Posted by frengo - 2014/09/25 13:18

there's another way to do that?

via a module for instance?

I noticed that if i right-click on the link and open on other window/page the pdf opens, so it should not be related to wrong path.

don't ask how but changing file name works.

Now all works properly.

Thanks and sorry for my previous post.

I've been using the iframe links with percentages successfully for looks like about two years. Now, all of a sudden, they aren't working. On both Joomla! 2.5.28 and 3.6.2, the window opens, but it just flashes, the "stop" and "reload" icons on the browser flash. I can open the link in a new tab or window without a problem. I've upgraded to the latest version. I've tried changing my links from percentages to set widths and it doesn't help. I'm out of ideas! I've tried the links on both Chrome and Firefox with the same result, except with Firefox I have to close the browser to get the flashing to stop.

I disabled the page until I can fix the problem, but I've reactivated it so you can see what it's doing. It's the links on this page (which aren't for PDFs, but it's the same behavior).

Obits

Hello,

Could you provide a temporary access to your J! backend by email so we can investigate the problem?

Regards,
ARI Soft

Actually, making the change (eliminating the lightbox for PDFs) solved some problems that users were having with that configuration. For some reason, Apple device users were having problems. This solved those, so I'm just leaving it as it is. Thank you! :-)
