Raise lightbox above other elements?

Posted by aczdreign - 2013/07/31 21:21

_____

Hello again. Plugin works beautifully, especially since you all helped me get it working on my google calendar links.

One more tiny issue that I'm noticing is that, if there's a youtube video embedded on the page below, the thumbnail of the video shows through the lightbox.

Is there a way to bring the lightbox forward? With the way I'm using it, I need it to lay over everything else.

http://www.acadianatherapeuticriding.org/index.php/classes/online-registration

pass: guest1234

if you make sure the 'video' tab on the right side is selected, and then open any of the automated or PDF forms, you'll see what I'm talking about.

I apologize if this issue has already been taken care of, I went through several pages of the forum and didn't see anything in regards to it.

Hello,

This problem with HTML code which is used to embed YouTube video. It is necessary to add wmode=transparent parameter to URL which is used in element where video file is loaded.

Regards,
ARI Soft

Perfect, thank you!

To clarify, for future users, I had to change the URL from

"//www.youtube.com/embed/BAIoFQW5BOo?rel=0"

to

"//www.youtube.com/embed/BAIoFQW5BOo?rel=0&wmode=transparent"

I actually had to do a little additional research to figure out how to place the parameter into the URL, so I thought I'd post it here for anyone else with the same issue.
