## subDir="" and thumbPath= generateThumbs=""

Posted by Jeroen574 - 2013/08/18 17:25

---

Hello there,

subDir="" and thumbPath="thumb/{fileName}" generateThumbs="" :( This all is not working for me.  
When i make a subDir inside my images folder subDir=(thumb) to use my one thumbs and put the thumbs in there.  
It does not use my thumbs it keeps generate thumbs also from the subDirfolder/thumb.

```
{arisexylightbox activeType="imglist" thumbWidth="200" dir="images/slideshow_boeketten"
thumbPath="thumb/{fileName}" generateThumbs="" subDir=""}/{arisexylightbox}
```

<http://www.terraverdedesign.nl/wat-doen-wij/boeketten.html>

Thanks for responding.

It now seems that this part is not working: {fileName}  
When i put in thumb/{fileName} it does not work  
but when i put in: thumb/boeketten-1.jpg it does work but i get all the same thumbs.

Hello,

Download the extension again and upgrade "ARI Sexy Lightbox" module and "ARI Sexy Lightbox Anywhere" plugin. After this use the following code:

```
{arisexylightbox activeType="imglist" thumbWidth="200" dir="images/slideshow_boeketten"
thumbPath="thumb/{fileName}" generateThumbs="" subDir=""}/{arisexylightbox}
```

Regards,  
ARI Soft

Hello downloaded the plugging two days ago.  
Can't download the plugin now cant get in contact with the person who has the download details.  
So is it really nessasary to download the plugin again?  
has something changed since two days?  
maybe i can chance it inside the plugin?

---

It now does not read the subdir anymore.  
And it does react to thumb/boeketten-1.jpg  
but not to thumbPath="thumb/{fileName\}"

i just got the download details wait a minute and i will get back to you.
