
IE 8 Doesnot work well 21 px top and left overflow

Posted by Jeroen574 - 2013/08/20 03:07

Hello again,
Thanks for solving my last post.

I found that in IE8 the overlay creates a 21 px overflow at bottom and right position.
So if i do this

```
* {  
margin-left: -21px;  
Margin-top: -21px;  
}
```

It works fine. But of course this screws up the website.

I cant adress this div because it has a hash voor a ID.
It also uses inline code.

Maybe i give it a class so I can adress it and give it a margin-left -21px and margin-top -21 voor IE8.

So I tought I adjust this file but it is coded or something like that. jquery.sexylightbox.min.js
Can I get the not: (min) version? The one I could Read?

Or maybe you know how to solve this?

<http://www.terraverdedesign.nl/wat-doen-wij/boeketten.html>

It only happens in IE8 mode.

```
html , body {  
height: auto !important;  
}
```

does not work.

Hello,

Could you restore styles to original state so we can investigate the problem? Currently the image is loaded fine into the lightbox in IE 8.

Regards,
ARI Soft

Hello yes i will do that after this message.
I solved it but not al to good...

I added a class to the lightbox div. class="twenty"
and than I wrote a IE8 Style sheet with this in it.

```
.twenty {  
  height: 99.9% !important;  
  width: 99.9% !important;  
}
```

This works but does not solve the problem voor other people.
So if you still want to take a look at this thanks
It is the same problem as the post before this post have taken a look at it.

Posted by Jeroen574 - 2013/08/20 07:25

I have changed it back now

Kind regards,
Jeroen

Hello there,
I am would like to know if you are looking at my site?
If not I can play around with your plugin to see if i find a better solution.

You can solve the problem by giving the lightbox DIV a class = (lightboxy) than we can link a IE8 stylesheet.

maybe

```
lightboxy {  
  
  height: 100% !important;  
  width: 100% !important;  
}
```

Also works did not yet test that.
only tested: 99.9%

can you let me know if you are looking at the site or not?
Or if you are going to look at it later or not?

Than i can desite what to do....

Posted by admin - 2013/08/20 11:05

Is it possible to see the problem now? Could you send also an image where we can see the problem?

Regards,
ARI Soft

Posted by Jeroen574 - 2013/08/20 11:12

Yes on it now

<http://www.terraverdedesign.nl/wat-doen-wij/boeketten.html>

I use IE.10 with browser mode 8 on windows 7 64bit.

Send you a image next.

:laugh: :woohoo: :silly:

Hallo, Thanks you are really great at what you do...
Yes it works like you said!

I am going to advertise your plugin and your forum service at yoomla extensions.org.
I have seen how you solve almost all requests at this forum and in now time really great...

Maybe I wait a bit going to start a new website in a few days much better than this one.
Going to use your plugin more extensively so it looks better.

I have the habit to improve plugins make them do exactly what I want and share these improvements with the owners mostly the like the improvements I suggest they will be properly tested and working.

So how do you feel of sending my jquery.sexylightbox.min.js not packed?
So I can work with the latest version I will not share it or the code with anyone.
I understand everything is copyrighted.
It will take a little bit of time till I start adjusting the plugin but if it is worth mentioning I will certainly let you know.

Take a look at scriptmerge plugin this is one I took a look at recently
<http://www.yireo.com/software/joomla-extensions/scriptmerge>

Thanks a lot...

regards,
Jeroen
