
dedicated gallery image

Posted by blaci - 2010/06/08 09:37

Can I set a dedicated png file for the gallery? I use ARI Sexy Lightbox Anywhere plugin.

For example:

```
{arisexylightbox activeType="imglist" dir="images/gallery10"}{/arisexylightbox}
```

and just show a png file not the thumbnailed image?

Sorry my bad english!

Thank you!

We have updated the extension that it supports this possibility. Download updated extension in 'Member Area' on our site and upgrade 'ARI Sexy Lightbox' module and 'System - ARI Sexy Lightbox Anywhere' plugin, please. After this, type in content the following code:

```
{arisexylightbox activeType="imglist" dir="images/gallery10" type="customtext"}Show gallery{/arisexylightbox}
```

Regards,

Thank you very much! It works fine!

Fantastic support!

I wrote some words at JED, but not show yet. :-(

However, is it possible to develop this feature to module show too?

For example:

```
{arisexylightbox activeType="module" width="300" height="250" id="65" title="Joomla! module"}Show FLV video{/arisexylightbox}
```

Thank you very much!

Could you explain, this code doesn't work on your or do something wrong?

PS: Don't worry about review, JED administrators should approve it before a review appears on the site.

Yes, it's work when the activeType="imglist" and not when activeType="module".

Sorry my bad english!

Download updated extension in 'Member Area' on our site and upgrade 'System - ARI Sexy Lightbox Anywhere' plugin, please. It should resolve the issue.

Regard,
ARI Soft
