_____

Hi !

Wonderful plugin, works fine - but - i have two problems.

I want only 1 Image as link to the lightbox gallery.

1)
I had a problem wirh Imagelist:

When i am using type "imglist" "gallery" i can use a pin and a shadow around the thumb - ok - but i did not need a table :)

When i am using type "singleimage" i can't use pin and shadow..

Is there a way to use this ?

2)
Another page i want to use ari slick - "looks very cool"
I want to see at the top the FIRST picture..
Even if ia am use descending or ascending and start the lightbox - the arrow shows always LEFT not right. Because the first pic (that i cant see) is on the bottom....
It is possible to show the first pic on top and when i click on it - the lightbox starts with the FIRST picture and arrow right ?

you can see it on http://www.bergsteiger-opening.at/gallery

thx

_____

Hello,

1. Theme like "Shadow", "Pin" and etc. can be used only for "Simple gallery" layout type.

2. Could you send images with comments by email where we can see what's wrong and what do you want to achieve?

Regards,
ARI Soft
