Hello,

If you want to use a plugin code in PHP file then install "ARI Sexy Lightbox" module and install, configure and enable "System - ARI Sexy Lightbox Anywhere" plugin. Set "Mode" parameter in plugin settings to "Anywhere". After this you can use the following plugin code:

```
{arisexylightbox activeType="rcontent" width="792" height="294" url="http://www.domain.com/video/my_video.flv" title="Video"}{/arisexylightbox}
```

Where LINK\_TO\_IMAGE is a link to an image. The video will be shown into the lightbox when a user clicks on the image.

1. We suppose you use an incorrect link to the image. Where it is located relative to Joomla! root directory?
2. Add `bgColor="#000"` parameter to `{arisexylightbox}` tag. The code will look like:

```
{arisexylightbox activeType="rcontent" width="792" height="294" url="http://www.domain.com/video/my_video.flv"
title="Video" bgColor="#000"}{/arisexylightbox}
```

The file is show fine on our test server:

---

<http://www.ari-soft.com/images/fbfiles/images/lightbox-0b9aac8568bb2ee97121f83ccb9ac7d5.jpg>

It can be a conflict with a 3rd party extension on your site. We can investigate the problem in more details if you provide a link to a page where we can see it.

The module and the plugin haven't updated on your site so you see all images from the selected folder. We wrote that it requires to updated the module and the plugin in our previous post.

If you want to add more than 3 image per row, add itemCount="10" parameter to {arisexylightbox} tag and if you want to show images without padding, add the following CSS rule to a site template CSS file:

```
TABLE.asexy-table {width: auto !important;}
```

Hi  
i commented the previous php code and

1. the video works
2. the popup box works

Now please tell

1. how to have best quality for the thumbs
2. under the thumbs (specifications tab page) i have the `{/arisexylightbox}` how can i erase it
3. How can i put for every image a title
4. If i disable the "Include jQuery" option from plg anywhere everything is ok but if enable it the tabs pages does not work

Can you tell me what can i do?  
regards <http://www.ari-soft.com/images/fbfiles/images/image76.JPG>

5. you told me to add css code for the width without padding in the master file Wherefore the master file it too big and i can't touch it is there any other css file to add this code?

## Re:add a video

Posted by admin - 2014/05/05 16:59

1. We will check it.
2. You use `{/arisexylighbox}` instead of `{/arisexylightbox}`
3. Titles can be defined in CSV file. Link to the sample CSV file and instructions how to use it is available here.
4. Different extensions on your site use jQuery library and load several copy of jQuery library. Some of these extension can't work properly when several copy of jQuery library is loaded. Better solution for performance is load only one copy of jQuery library.
5. You can add it to any CSS file which is loaded on the page. For example to `/templates/gantry/css/dropbox.css` file.
