## Article coming up with

Posted by clay carroll - 2014/09/13 15:17

---

Is there a way to go right into lightbox displaying my article.  
Right now I have a link, and that works.

I am trying to setup using ARI Ext Menu, when you select a menu item, my article will open in the lightbox, not a link you have to click on in the article itself.

I am new to this, so a little detailed help might be necessary.

I have search the forums and the user guide and really havent found a solution.

Much appreciated.

Hello,

It can be done with help of "System - ARI Sexy Links" plugin from "ARI Sexy Lightbox" package.

We can help to configure the plugin if you provide a link to a page with the menu and specify what menu item do you want to show into the lightbox.

Regards,  
ARI Soft

Thanks for the quick response.

<http://www.analyzerrepairinc.com/>

Preferably I would like all of the menu items, if it can be done.

Thanks,

Install configure and enable "System - ARI Sexy Links" plugin and set "Elements CSS selectors" parameter in plugin settings to the following value:

"#ariext91\_container A"|width=800&height=600&tmpl=component

That was it. Great help with one line of code.

I can change the color of the back ground (behind the box), but not the white in with the sexy box. I tried with the plugins and module variables. Do I have code the color someplace else?

Again, thanks for the help!

---

Use the following code:

```
"#ariext91_container A"|width=800&height=600&tmpl=component&background=#000
```

instead of the previous one.

That got it, I think I see whats going on, I was using the wrong syntax.

One last request, I wanted a box on all menu items, but it didn't occur to me that the home button should bring it home without the box.

Do you have a fix.

Again, thanks

Try the following:

```
"#ariext91_container LI:not(.ux-menu-item476) A"|width=800&height=600&tmpl=component&background=#000
```
