
How to change the size of the sexy lightbox?

Posted by tonyhang - 2015/03/01 13:24

Hi,

I just bought ARI Smart Content and ARI Sexy Lightbox. I am using ARI Sexy lightbox with ARI image slider. They work fine.

However, the popup lightbox is a little bit small to me, especially if I load the page and on my mobile phone. I want to change the size of the popup lightbox.

I modified sexylightbox.css to change the font style for caption. But I don't know how to change the default lightbox size. To save my time, could you please tell me the filename and the code which I should modify?

Thank you!

Tony

Hello,

What content do you show into the lightbox (images, remote page, inline content, video)?

Regards,
ARI Soft

Images. use lightbox to display images loaded from ARI image slider.

Thank you!

The extension adapts lightbox size to screen size when shows images. If you want to use fixed size (for example "Lightbox width" and "Lightbox height" parameters from module settings), open /modules/mod_ariimageslider/mod_ariimageslider/kernel/ImageSlider/Lightbox/class.Arisexylightbox.php file and replace the following code:

```
else if ($bgColor)
{
    $uri = new JURI($link);
    $uri->setVar('background', $bgColor);
    $lnkAttrs = $uri->toString();
}
```

with the following one:

else

```
{
$uri = new JURI($link);
    if ($bgColor)
        $uri->setVar('background', $bgColor);

        $uri->setVar('height', intval($params->get('lightbox_height'), 10));
        $uri->setVar('width', intval($params->get('lightbox_width'), 10));

        $lnkAttrs = $uri->toString();
}
```
