## Menu-Item in Lightbox

Posted by rudi72 - 2015/05/30 23:30

---

Hallo Experts,

please can you help?

I have tried everything to display an article, linked in a menu, in the lightbox.

The testside is <http://www.cms.ibf-institut.com>

I want to show from the topmenu Impressum and Datenschutz in the lightbox.

I also want some articles from the left menu appearing in the lightbox.

please can you help me?

Hello,

Install "ARI Sexy Lightbox" module, then install, configure and enable "System - ARI Sexy Links" plugin and populate "Elements CSS selectors" parameter in plugin settings the following value:

`".menu-mainmenu A,.menu-mainmenu A"|width=700&height=500&tmpl=component`

Regards,

Hallo experts,

thank you very much for your quick replay.

Sexy Link is working now how i want.

This is the code i inserted:

`UL.menu-mainmenu A,.menu-mainmenu A,.menu-mainmenu A"|width=700&height=500&tmpl=component`

`UL.menu-sidemenu A,.menu-sidemenu A,.menu-sidemenu A,.menu-sidemenu A,.menu-sidemenu A,.menu-sidemenu`

`A,.menu-sidemenu A,.menu-sidemenu A"|width=700&height=500&tmpl=component`

But there is still one problem:

After calling the homepage you must klick the Menulinks two times befor the item is displayed in the lightbox.

You can also first klick on a menuitem without lightbox, then on the next klick a menuitem with lightbox will appear in the lightbox.

So, with the first transfer of the site the lightbox is not activated.

The first transfer the link-item is displayed as a normal site.

Look at the Website at Impressum or at the lower menu on the left site.

The problem occurs because old versions of jQuery instances are loaded by some extensions instead of using jQuery instance which is loaded by Joomla!

Your service is great!!!

Can you tell me how to find out which extension is using the wrong version of jQuery?

It seems they are loaded by site template. You can see it if open HTML source of the page.
