problem with lightbox image
Posted by dtws2008 - 2015/12/23 08:33
_____

Hello,
I use a rockettheme template. I get the following image: http://www.ari-soft.com/images/fbfiles/images/ari_lightbox.JPG
How to fix?

_____

Hello,

Could you send a link to a page where the problem occurs?

Regards,
ARI Soft

_____

This is a conflict with site template styles. Add the following CSS rule to a site template CSS file to fix the problem:

#SLB-Wrapper,#SLB-Wrapper DIV {box-sizing:content-box;}

_____

By the way I can't find a way to style inline content with html. Am I missing something?

_____

You can use any HTML code for inline content (including CSS properties). For example:

Sample text

_____

So, in my rockettheme template, the html tags are removed in the module. (from the inline content. no problem with the article content) No problem from Anywhere plugin. Can be fixed?
Another thing is: When operated from the module, I can't get rid of the scrolling bar at the modal box, no matter what the box height is.

_____

1. Download and upgrade the module. It should resolve the problem with HTML tags.

2. Could you provide a link to a page where the problem with scrollbars appears?

Regards,
ARI Soft

_____

This problem with the following CSS rule from site template CSS file:

.contentpane.modal {
    padding: 1.5rem;
}

_____

Hello,
My popup window is set to auto open on page loading. Now I see that the popup doesn't automatically loaded after login or registration. I have to click a menu item that loads the profile page (The entry page after login or registration), only then I get the popup to showing. Also, after logout I don't want the auto popup to appear at the site landing page (The user redirected to the landing page on logout)

_____

Hello,

Do you use auto load in module or use "ARI Sexy Lightbox Anywhere" plugin?

Regards,
ARI Soft

_____

I use a module which is assigned to a specific menu item.
Regarding this, I use Community builder and I assign the module to the CB profile menu item. The popup appears in profile page but also appears in the edit profile page which is not desirable.
I can use the anywhere plugin but don't know how to embed the plugin tags in CB pages which are not articles.

_____

Modules in module positions are shown by site template. A module doesn't affect on this behaviour.

_____

Sorry, I don't understand.
1. How to connect a module to a specific page for on page loading popup. In my case I use the assignment property of the module to assign a module to a specific menu item. This menu item in my case is "Community Builder- profile" type of item. The problem is that the popup also triggered in "Community Builder- edit profile" page. What I am doing wrong?

2. In case of anywhere plugin, How to embed the plugin curly tags in pages that are not articles.

_____

1. "Menu assignment" parameters section on module settings page is used to specify pages where the module will be used. This is a common parameters section for all Joomla! modules. If you need some specific conditions for pages, you can try to use "Modules Anywhere" extension.

2. The plugin can be used in any pages. For this set "Mode" parameter to "Anywhere" value in plugin settings.

Regards,
ARI Soft

_____

Regarding anywhere plugin. Where to write the plugin code in case of pages that you can't write in them. This pages are not articles. For example: Community builders pages.

_____

For example plugin code can be used in products description for VirtueMart extension (or another shop extension) and etc. If Community Builder doesn't provide any UI for editing text on pages which you need, plugin code can be added to Community Builder template file(s).
