
Border around the Images

Posted by DanielSw2 - 2010/07/27 12:17

Hey there,

On our old Page we used the module for displaying Pictures on our infopages. On the new page we make it the same way but we want borders around the images like there:

<http://k190-d1.s34.tune-up-it.de/sims3-traumkarrieren-infos>

I saw the following CSS-Code:

TABLE DIV.asexybox-image

```
{  
  background: #FFFFFF none repeat scroll 0 0;  
  border: 1px solid #C8C8C8;  
  float: left;  
  padding: 4px;  
}
```

But it doesn't work on our new page <http://simway.net/sims3-luxus-accessoires-infos>.

What code should I choose?

Best Regards,
Daniel

Hello,

This code should work, maybe you place it in wrong place. Could you specify where you have added this code on new site?

Regards,
ARI Soft

Okay we habe gzip enable, so i've disabled it and enabled it again and it works.
Thank you!

Is it possible to use different CSS code for different uses of the ARI Sexy Lightbox Anywhere plugin??

I am using the light box to display both flickr photo galleries and local image folders. In each application, I would like if I could write my own CSS code to customize only that page.

Hello,

You can wrap {arisexylightbox} tag with HTML tag with specific CSS class or if 'Simple Gallery' layout type is used, you can specify container CSS class with help "mainClass" attribute of {arisexylightbox} tag. For example, if you want to create border around image, the following code can be used:

```
{arisexylightbox activeType="imglist" type="gallery" mainClass="simple-gallery"}
```

and the next CSS rule:

```
TABLE.simple-gallery TR TD IMG
{
  border: 2px solid red;
}
```

Regards,
ARI Soft
