
Issue with Sexy Thumbnail

Posted by morten44 - 2016/08/10 19:37

Hi

I have another issue on www.humanabrasil.org with Sexy Thumbnail

You fixed some issue i had on previous ticket 6 days ago.

Please see attached

I use something called Raxo News to display news on frontpage

I make a news, add text and picture, resize in editor to get the Sexy thumbnail to work and save in a category so its shown at the frontpage

This part works fine, however on the news marked, when you click the image its supposed to open the news, but now it tries to open the image instead

In the Sexy Thumbnail plugin I have tried to leave out path: `modules/mod_raxo_allmode/tools` but still no joy.

Is there any work around for this so its disabled when it shows in the frontpage module but when article is open it can still be clicked and enlarged?

Thanks for your time

Regards

Hello,

Download and upgrade "ARI Sexy Lightbox" module.

Hi

Thanks for your reply

I have downloaded and installed the module but still it does the same.

I have enabled the module as well but its not published in any position as I understand that the only requirement is that its installed?

hm, Any idea?

If you want to use the plugin only for images with `.zoom` CSS class, set "Specific CSS class" parameter in plugin settings to `.zoom` value.

Hi Again

Thanks i did that and it disables the zoom on the frontpage module and in the article

If i then enter the article and edit the picture and add class: .zoom to the image it works as it should

Its not loaded on frontpage module BUT its loaded in the article

Thats good enough for me as at least I have the option to enlarge images and control where

Thanks alot :)

Regards

Morten
