Admin Books Pages Source

Posted by taoh - 2016/09/20 01:18

_____

Hi

Having played with Smart Book on my test server and I decided it was OK to load on the 'live' site.

But when I went to create a book I found that the Pages Source was completely different and I can't figure out how to give the book pages.

In the attached file the top picture comes from the test site and worked perfectly.

The second comes from the 'Live' site and I can't figure out how to use it.

Both sites were installed from the same .zip file and are showing the same version 1.10.3.

As far as I can see they are both configured identically, so what have I missed?

Cheers
Niall

_____

Hello,

Could you send screenshot(s) by email so we can see what's different?

Regards,
ARI Soft
