
Sexy Lightbox - opening in thumbnail size

Posted by Mogwai - 2017/06/26 17:30

Hello,

I have one site with Sexy Lightbos which opens immediately when clicking on a link, which should lead to a page where 3 thumbs should be shown. Actually when I click the link a tiny little sexy lightbox window with the first photo opens (also showing the title even though I have setting for no module title).

You can see this behavior in this site - click on the first thumb where it says "Memy's Shows".

http://www.chinese-crested.eu/index.php?option=com_content&view=article&id=88&Itemid=332&lang=en

Same behavior in the German version.

I made another Sexy Lightbox in the same homepage and it does work properly (even opening on load). I have checked for mistakes but I cannot find it.

If you need a login, let me please know.

Thank you for your help.

Regards,
Mogwai

Try to temporary disable "System - ARI Sexy Thumbnails" plugin and check results.

Hi,

I get this error in the backend when I deactivate the plugin:

Hi,

I have uninstalled plugin Sexy Lightbox Thumbnails. In the online version it is ok now and my slideshow works again, but locally I get the same error message as in the screenshot from yesterday. When I switch to php 5.6 it works fine but I have the message in the backup that I should upgrade to higher php. When I switch my server (WAMP) back to php 7.0.10 I get the error message again and I cannot work in the backend because I get kicked out to the login mask. I tried to repair database and clear cache, but no change.

I even imported the online database to my local server, but in vain.

My understanding of the screenshot is, that there is a conflict with ARI Pretty Photo and ARI Pretty Photo anywhere. Is

there somewhere a newer version of Sexy Pretty Photo and Sexy Lightbox available? Pretty Photo I have installed v 1.8.6 which I just bought on June 23, 2017; Sexy Lightbox is v 1.11.9. Yes, I don't understand why there is no trouble online - that server has php 7.0.

Must I really uninstall the paid ARI Pretty Photo to be able to work locally again with php 7.0.10?

Regards,
Mogwai

Download "ARI Pretty Photo" package in "Member Area" on our site and update "System - ARI Pretty Photo" and "System - ARI Pretty Photo Anywhere" plugins.

I have installed the version from the member area; it was also v 1.8.6 on last Friday when I purchased.

I tried to uninstall ARI Pretty Photo, but then I had the error message about ARI Fancy Box. I don't continue uninstalling as I don't want any more error messages about any of my ARI products I bought and use. I remain with php v. 5.6.x in my local installation till I get another way to solve this issue.

Thank you
Mogwai

It doesn't require to uninstall the previous version of an extension to install a new one. Just install new version via standard Joomla! installation page. About "ARI Pretty Photo", we updated it today and this contains the fix for the described problem in your previous message.

Hi,

I installed Pretty Photo 1.8.6 and switched back to php 7.0.10.
Now the error is about Fancybox:

(!) Deprecated: Methods with the same name as their class will not be constructors in a future version of PHP;
plgSystemArifancybox has a deprecated constructor in
C:\wamp\www\chineseecrested\plugins\system\arifancybox\arifancybox.php on line 17

7 0.2800 4213280 JPluginHelper::import() ...helper.php:170
```

Once again I go back to php 5.6.x in my local installation.

Good night,
Mogwai

Hello,

I did install the update of the Fancybox and so far no error message when using php 7.0.10. Thank you for all the assistance.

My I place a suggestion:

It would be great if in the member area the date of the version could be added to see - whenever we check there - if we have the latest version or if an update has been made. I don't think that everyone downloads and manually adds the version to the download to see which versions we have installed.

Have a good continuing day,
regards Mogwai

Sorry for inconvenience. We are working on a new version of our site and it will support auto-update for Joomla! extensions.

Regards,
ARI Soft
