
activeType=module not working for Spider Video

Posted by tompclip - 2017/08/22 12:45

If i try to open a Spider Video Player module nothing happens but all other modules open fine. I suspect a jquery conflict. Have you heard of this before?

Hello,

Could you provide a link to a page where the problem occurs?

Regards,
ARI Soft

We need to see the problem so we can investigate it. As possible solution, the module can be load into an article (for example with help "Content - Load Module" standard Joomla! plugin) and then this article will be loaded into the lightbox. In this case the article will be loaded into element.
