
Auto-Paginate Results Perhaps with Module?

Posted by Ellsinore - 2017/09/14 18:48

Hi!

You have helped me a ton with the regex for my gallery pages, but I'm finding I need to manually edit almost every one.

Basically, I just want the gallery to include about 100 thumbnails per page in the Joomla! article. The page breaks work great, but again, I have to manually edit each article as I continue to inherit images with different naming conventions.

I was thinking perhaps a module would be the solution for this, i.e., pull the images from this directory and display each 100 thumbnails on successive pages.

I did pull up a module and checked the "imglist" options. I couldn't find just what I was looking for, but there are so many parameters, I'm thinking I just missed them.

If there's a way to do this with "{ariseylightbox activeType="imglist" . . ." that would be great, too, but I am not finding it.

Thanks!

Hello,

"ARI Sexy Lightbox" doesn't support this functionality, but it is supported by "ARI Magnific Popup PRO". You can see demo here.

That looks great! Unfortunately, the transaction won't go through because the service wants me to sign up for something I don't want -- and won't process the order if I don't accept and enter additional information. I'll try to contact the payment processor tomorrow. Thanks!

It seems the problem is resolved.

Yes, and it's exactly what I needed. Thank you! :-)
