## selecting articles by group-id and article-id comb

Posted by dijkhuizen - 2018/05/31 19:07

---

Using the following plugincode of ARI Sexy Lightbox Anywhere I present a couple of Joomla articles in a lightbox-view after clicking the image:

```
{arisexylightbox activeType="article" width="500" height="450" id="7,8,9" title="Articles"}  
  
{/arisexylightbox}
```

It works great.

Is there a possibility of using the article-group-ID and the article-id of the article to start with?

Second question: is there a possibility that the user can swipe through the articles (when using a tablet)?

Regards,  
Menno

Hello,

Sorry, but the extension doesn't support ability to use article category IDs to load all articles.

Regards,  
ARI Soft

Thank for your answer.

My second question is not answered yet: Second question: is there a possibility that the user can swipe through the articles (when using a tablet)?

Regards,  
Menno
