## ARI SexyLightbox plugin results in JQuery conflict

Posted by straetch - 2020/01/25 10:43

---

In Kunena Forum a link icon does not activate when clicked.

The problem was narrowed down to a JQuery conflict with a script that addresses

<http://ajax.googleapis.com/libs/jquery/1.8.2/jquery.min.js>

When I disable the ARISexyLightbox plugin, the problem with Kunena was resolved.

I use the ARISexyLightbox module version 1.11.13 (nov 2018) - the latest - and the plugin version 1.10.4 (dec 2012) that came with the module.

Using Joomla 3.9.14

Hello,

Open plugin settings page and set "Load jQuery method" to "Local copy".

Regards,  
ARI Soft
